

## Navertica Hotel Services (NaHS)

**Navertica Hotel Services (NaHS) is a part of the Navertica Hospital Information System (NaHIS). NaHS is an add-on system based on the Microsoft Dynamics Business Central platform and is suitable for hospitals, health centers, hospitals, bedside medical systems.**

### NaHS includes the following services

- Patient management
- Bed fund management
- Keeping records of paid services
- Invoicing services
- Communication with external services - dining room, luggage service, laundry
- The detailed evaluation of patients and wards at the current time

The NaHS system is an extended system fully integrated into the Microsoft user interface on a unified database Microsoft SQL platform. Navertica Hospital ERP is prepared following the requirements for continuous real-time data recording and evaluation.

### Benefits

- Hotel services are fully integrated into the economic system.
- Clients' records are related to all other agendas of the system.
- The solution is prepared to manage booking and room occupancy linked to bed management.
- The system keeps records of paid services and their scheduling into calendars for the service providers.
- The billing module of services has links to the ordered services with the possibility of evaluation by the use of the linked projects.

## Charakteristics

The system represents an extension that adds to the primary system the functionality of hotel services. These are mainly records of clients with records for subsequent invoicing of paid services. Part of the solution is a timing schedule and graphical representation of the client's rooms and beds with the possibility of a previous booking.

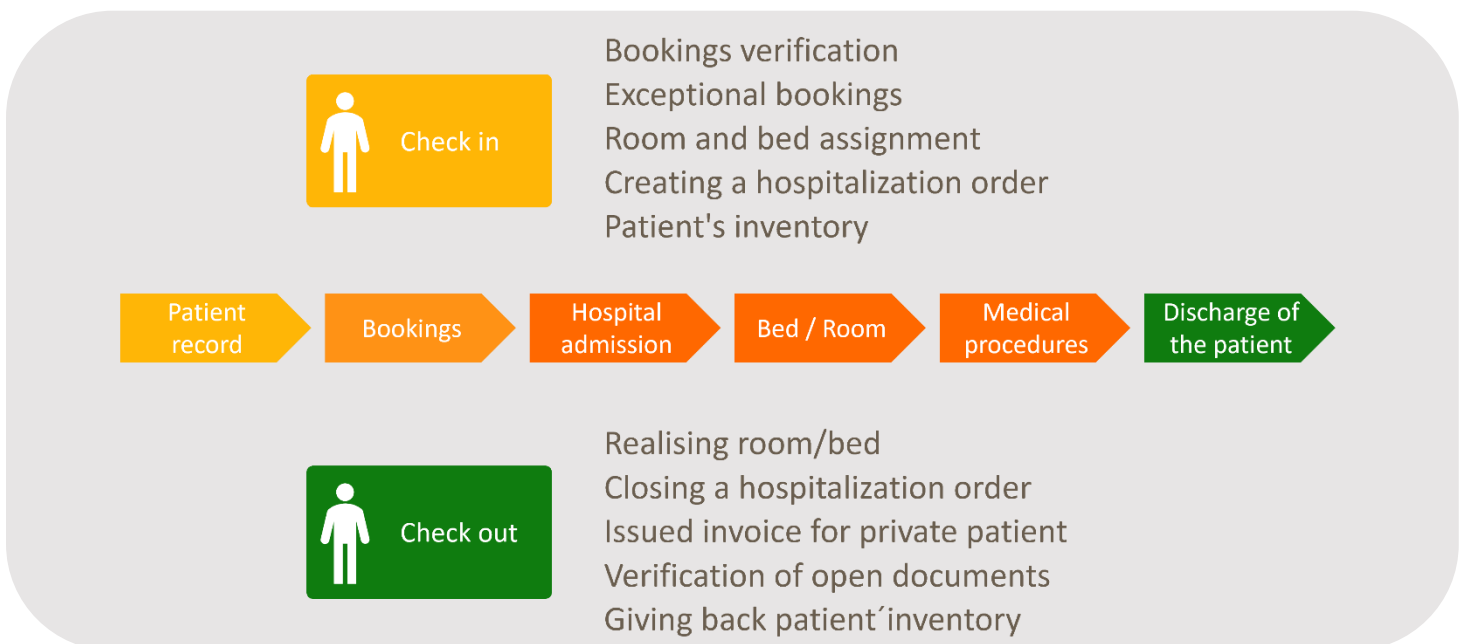

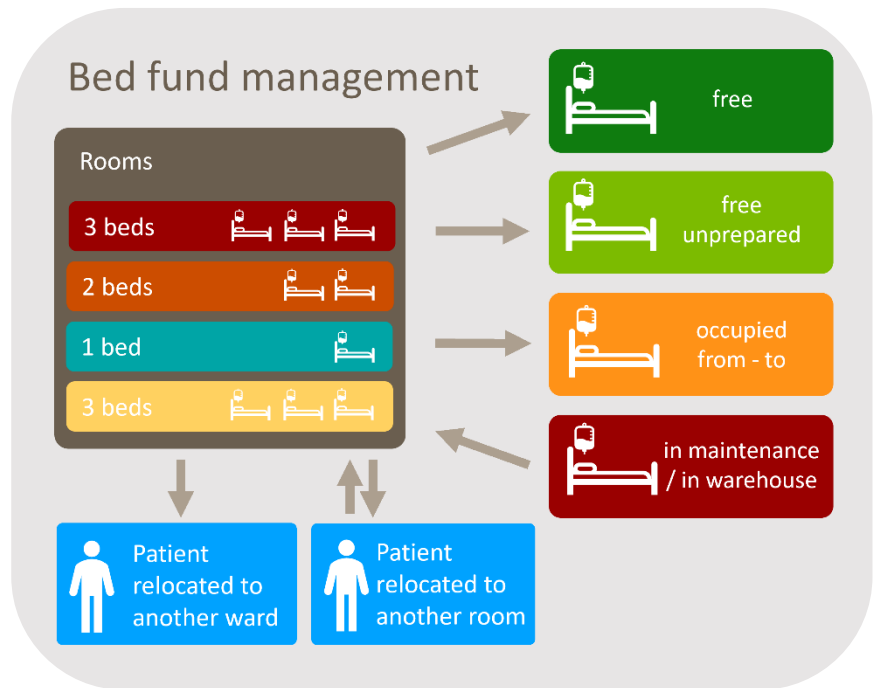

At the same time, there is also a schedule of paid services for individual patients and similar services bookings in a similar way linked to calendars and capacity display of service availability. The patient goes through the check-in workflow on entry and again when leaving the check-out process to check that all necessary steps were correctly taken. Part of the extension is also the allocation and ordering diets to clients.

## Services and accessories

- Parameterization of the system
- Training
- Initial data import
- Operational support
- Possibility of connection to external systems
- Possibility of connection to external BI ...

## Deployment conditions

- Microsoft Dynamics Business Central
- Navertica NaHERP
- NVR Essentials (optional)
- Power BI (optional)
- Navertica NaClin
- Scribe (optional communication between the linked systems)

## Supplementary cornerstones

*Typical pain and customer requirements in the segment*

- Monitoring of partial costs and benefits per patient and department in real-time with connection to the economy and with the possibility of output to analytical and presentation tools

*Product characteristics that allow responding to typical pains*

- The structure of individual agendas was created concerning partial monitoring and analytical evaluation in time and detail up to the level of the client, department, or selected parameter according to the structure of the organization providing hospital care.

*What other benefits does the product provide in conjunction with other conventional products in the segment, and how does it indirectly support other processes?*

- NaHS enables communication with external systems. Its internal connection to the basic economic system enables online processing and the immediate availability of managerial data.

*What can be a benefit in the future?*

- The chosen platform allows sufficient development flexibility and support for MS products, their mutual connection, and development in the future. The solution is ready for Cloud or On-Premise deployment.
